Office Action Summary

Application No.

09/759,601

Applicant(s)

BENSKY ET AL.

Examiner

Tung S Lau

Art Unit

2863

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 September 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-105 is/are pending in the application.
- 4a) Of the above claim(s) 21-29, 51-60 and 81-90 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-4, 8-14, 18-20, 31-34, 38-44, 48-50, 61-64, 68-74, 78-80 and 91-105 is/are rejected.
- 7) ☒ Claim(s) 5-7, 15-17, 35-37, 45-47, 65-67, 75-77 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Election/Restrictions

1. Claims 21-29, 51-60, and 81-90 stand withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention as noted in paper number 14.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 11, 31, 41, 61, 71, 91, 96, 101, 2, 3, 4, 8, 9, 10, 12, 13, 14, 18, 19, 20, 32, 33, 34, 38, 39, 40, 42, 43, 44, 48, 49, 50, 62, 63, 64, 68, 69, 70, 72, 73, 74, 78, 79, 80, 92, 93, 94, 95, 97, 98, 99, 100, 102, 103, 104 and 105 are rejected under 35 U.S.C. 102(b) as being anticipated by Olich (U.S. Patent 5,298,904).

Regarding claim 1:

Olich discloses a wireless communication device including a first synthesizer for generating a first radio frequency (RF) signal, the first RIF signal including a sequence of carriers; a transmitter for transmitting the first RF signal; a receiver for receiving a second RIF signal from a remote wireless device phase locked with the first wireless device (Col. 2, Lines 39-48), the second RF signal including a sequence of carriers corresponding to the carriers of the first RF signal (Col. 2,

Lines 49-59) , wherein the frequencies of the corresponding sequence of carriers of the first RF signal are different from the frequencies of the sequence of carriers of the second RF signal; a second synthesizer for generating a third RF signal (Col. 2, Lines 39-64), the third RF signal including a sequence of carriers corresponding to the carriers of the first and second RF signals, wherein the phase of the third RF signal is coherent with the phase first RF signal (Col. 3, Lines 1-44) ;and wherein the frequencies of the sequence of carriers of the second RF signals are the same as the frequencies of the sequence of carriers of the third RF signal; a phase detector for comparing the phase of each of the carriers of the second RF signal to the phase of each of the corresponding carriers of the third RF signal and generating a sequence of phase offsets (Col. 3, Lines 1-52) ; and a processor (fig. 5, unit 243)for determining distance between the wireless communication device and the remote wireless device by calculating an estimated slope of the sequence of phase offsets relative to the frequencies of the sequence of carriers of the second RF signal (fig. 9, 10).

Regarding claim 11:

Olich discloses a wireless communication device, comprising: a first synthesizer for generating a first radio frequency (R-F) signal, the first RF signal including a single carrier having a frequency f_{to} (Col. 2, Lines 45-64); a transmitter for transmitting the first RF signal; a receiver for receiving a second RF signal from a remote wireless device phase locked with the first wireless device (abstract), the second RF signal including a sequence of carriers (Col. 2, Lines 45-64), wherein

the frequencies of the sequence of carriers of the second RF signal are different from f_{to} (Col. 2, Lines 45-64); a second synthesizer for generating a third RF signal, the third RF signal including a sequence of carriers corresponding to the carriers of the second RF signal, wherein the phase of the third RF signal is coherent with the phase first RF signal, and wherein the frequencies of the corresponding sequence of carriers of the second RF signal are the same as the frequencies of the corresponding sequence of carriers of the third RF signal (Col. 2, Lines 8-52); a phase detector for comparing the phase of each of the carriers of the second RF signal to the phase of each of the carriers of the third RF signal to generate a corresponding sequence of phase offsets; and a processor for determining distance between the wireless communication device and the remote wireless device by calculating an estimated slope of the phase offsets relative to the frequencies of the sequence of carriers of the second RF signal (Col. 3-4, Lines 54-12).

Regarding claim 31, 41, 61, 71:

Olich discloses a method, computer readable medium containing program instructions for controlling a wireless communication device and for determining distance between the wireless communication device and a remote wireless device, comprising instructions for: generating a first radio frequency (RF) signal (fig. 5, 9, 10), the first RF signal including a sequence of carriers; transmitting the first RF signal; receiving a second RF signal from a remote wireless device phase locked with the wireless communication device (Col. 2, Lines 45-68), the

second RF signal including a sequence of carriers corresponding to the carriers of the first RF signal (Col. 2, Lines 45-68), wherein the frequencies of the sequence of carriers of the first RF signal are different from the frequencies of the sequence of carriers of the second RF signal; generating a third RF signal (Col. 2, Lines 45-68), the third RF signal including a sequence of carriers corresponding to the carriers of the first and second RF signals, wherein the phase of the third RF signal is coherent with the phase first RF signal, and wherein the frequencies of the sequence of carriers of the second RIF signal are the same as the frequencies of the sequence of carriers of the third RF signal (Col. 2, Lines 45-68); comparing the phase of each of the carriers of the second RF signal to the phase of each of the corresponding carriers of the third RF signal to generate a sequence of phase offsets; and calculating an estimated slope of the phase offsets relative to the frequencies of the sequence of carriers of the second RF signal (Col. 2, Lines 45-68), wherein the estimated slope is proportional to the distance between the wireless communication device and the remote device (Col. 3, Lines 8-64, fig. 9, unit 1044-1058).

Regarding claim 91:

Olich discloses method of determining distance between a wireless communication device and a remote wireless device (abstract), the method comprising the steps of: generating a first signal (Col. 2, Lines 45-68); transmitting the first signal (Col. 2, Lines 45-68); receiving a second signal from the remote wireless device (Col. 2, Lines 45-68), the second signal including

Art Unit: 2863

multiple carriers at different frequencies (Col. 2, Lines 45-68), wherein each of the multiple carriers are phase coherent with the first signal (Col. 2, Lines 45-68); performing a phase comparison using phase information of the first signal and the received second signal to generate multiple phase offsets (Col. 2, Lines 45-68); and calculating an estimated slope of the phase offsets relative to the frequencies of the multiple carriers of the second signal (Col. 2, Lines 45-68), wherein the estimated slope is proportional to the distance between the wireless communication device and the remote device (Col. 3, Lines 8-64, fig. 9, unit 1044-1058).

Regarding claim 96:

Olich discloses a wireless communication device, comprising: a synthesizer for generating a first signal; a transmitter for transmitting the first signal (Col. 2, Lines 45-68); a receiver for receiving a second signal from a remote wireless device, the second signal including multiple carriers having different frequencies (Col. 2, Lines 45-68); a phase comparator for performing a phase comparison using phase information of the first signal and the received second signal to generate multiple phase offsets; and a processor for calculating an estimated slope of the phase offsets relative to the frequencies of the multiple carriers of the second signal (Col. 2, Lines 45-68), wherein the estimated slope is proportional to the distance between the wireless communication device and the remote device (Col. 3, Lines 8-64, fig. 9, unit 1044-1058).

Regarding claim 101:

Olich discloses a computer readable medium containing program instructions for controlling a wireless communication device and for determining distance between the wireless communication device and a remote wireless device (Col. 2, Lines 45-68), comprising instructions for: controlling a first synthesizer that generates a first signal; controlling a transmitter that transmits the first signal; controlling a receiver that receives a second signal from the remote wireless device (Col. 2, Lines 45-68), the second signal including multiple carriers at different frequencies, wherein each of the multiple carriers of the second signal are phase coherent with the first signal (Col. 2, Lines 45-68); controlling a phase comparator that performs a phase comparison using phase information of the first signal and the received second signal to generate multiple phase offsets (Col. 2, Lines 45-68); and calculating an estimated slope of the phase offsets relative to the frequencies of the multiple carriers of the second signal, wherein the estimated slope is proportional to the distance between the wireless communication device and the remote device (Col. 3, Lines 8-64, fig. 9, unit 1044-1058).

Regarding claims 2, 3, 4, 8, 9, 10, 12, 13, 14, 18, 19, 20, 32, 33, 34, 38, 39, 40, 42, 43, 44, 48, 49, 50, 62, 63, 64, 68, 69, 70, 72, 73, 74, 78, 79, 80, 92, 93, 94, 95, 97, 98, 99, 100, 102, 103, 104 and 105:

Olich also discloses the use of modulated signal with the carrier RF (abstartc), local oscillator to generate signal and frequency divider (fig. 5, unit 337, 251),

Art Unit: 2863

the first mixer has a DC component (fig. 6a, unit 267), phase shift by 90 and quadrature-phase (N) degree (Col. 15, Lines 23-42), the remote device is based on distance (abstract), use to complete commercial transaction (Col. 2, Lines 26-53), the wireless device is to determine distance of the remote device (Col. 2, Lines 26-53), multiple carries phase coherent with the first signal and second signal (Col. 2, Lines 45-68), controlling the first and second carrier signal and phase compare having the same frequency (Col. 3, Lines 8-44).

Claim Objections

3. Claims 5-7, 15-17, 35-37, 45-47, 65-67, 75-77 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all the limitation of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: prior art fail to teach the calculation of $\text{Artan}(\text{quadrature/phase offset}/2)$, phase shift $(n)=0$, if $n=0$, $\text{shift}(n) := (\text{offset } n - \text{offset } n-1) + (\text{phase}(n-1) + \text{PI})$ if $\text{offset } n - \text{offset } n-1$ less than 0, $\text{offset}(n) := (\text{offset } n - \text{offset } n-1) + \text{phase}(n-1)$ otherwise, where $\text{remote device} = 3 \times 10^8 \text{ (power) m/s} \times (\text{slope of the phase shift}/2 \text{ PI})$.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments filed 9/12/2003 have been fully considered but they are not persuasive.

A. Applicant argues that the prior art does not show 'detect the phase of the returned carrier signals'. Olich discloses 'detect the phase of the returned carrier signals' in Col. 2-3, Lines 45-43, fig. 5, unit 311, 323.

B. Applicant argues that the prior art does not show ' a second RF signal including a sequence of carrier corresponding to the carrier of the first signal'. Olich discloses 'a second RF signal including a sequence of carrier corresponding to the carrier of the first signal' in Col. 3-4, Lines 65-33.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be

Art Unit: 2863

calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tung S Lau whose telephone number is 703-305-3309.

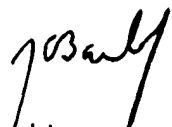

The examiner can normally be reached on M-F 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on 703-308-3126. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-5841 for regular communications and 703-308-5841 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
